BackupShield Professional

BackupShield Professional is an intuitive and extremely user friendly application which provides:

- Uncomplicated and secure backups and archives
- Easy to perform recovery of backups and archives
- Straightforward management of backups and archives

Tarmin Technologies Introduces libraries, within the Windows desktop, explorer and office applications you can send, open files from a selected library and create your own library. In comparison to archives, libraries can be viewed as a dynamic storage space whose size is forever increasing.

BackupShield Professional offers the following primary features:

Unified Management – BackupShield Professional Desktop Manager provides an easy to use unified environment to access all BackupShield Professional features.

Quick and easy One-Click Backup Options – Backup and restore at a click of a button

Intuitive step-by-step wizards – Provides Backup, Incremental, Differential Backup Wizards and Archive Creation Wizard

Flexibility of accessing library features within ArchiveShield, Windows Desktop, Explorer and Office applications – Send, create and open files from a library using various routes

Create archive/backup template once and use many times - Reduce cognitive memory load by using predefined workspaces/templates of commonly used items, defining what to

archive/ backup, this includes your desktop, documents, emails, photos, music, videos and registry folders.

Supports several backup types – Including normal, incremental, differential, mirror, daily copy, file move and continuous

Reduce storage space – By zipping all archives/backups with the option of maximum or optimal compression

Encrypt archives/backups deterring unauthorized access – Encrypt your archives/backups using AES 256 Rijndael bit symmetric key encryption

Verify archives/backups – Ensure that your data is verified

Archive/backup virtually to any storage media – including CD, DVD, removable device (Zip drive, USB), Quantum tape, FTP, LAN, online backup service or NOADS™ Server

Effortlessly retrieve backed up, archived and library files using the search facility – Catalog facility allows you to view, explore, search and restore files. This includes the option of importing backups and archives

Painless Recovery – Recovery wizards instructively steps you through the task of recovering all or selected archived/backed up files to their original or specified location

Manage your archives/backups through one common user interface – Enables you to create, edit, delete, execute immediately or schedule existing archives/ backups

Hassle free scheduling and recovery of archives/backups – on a daily, weekly, monthly, one-off period, at system start up, at login or when the system is idle

User Options for advanced users – Configure file extensions to be excluded from backup, advanced backup settings (including specifying backup type, output format, compression levels), email notification and recovery options

BackupShield Professional for administrators – Provides a complete toolset for administrators to assign individual and group access rights to backups and templates, specify archiving and logging preferences (including log content, size and location)

Prompt email notification – Of scheduled successful/unsuccessful archives/backups, with the option of log attachments

Manage and view logs of archives/backups – View all or selected logs with the alternative of printing or viewing logs in notepad format

Be efficient and save time by only specifying media details in Media Selection Manager Once – These details can then be used frequently in specifying where to backup in Backup Creation Wizard, One-Click Backup and Archive Creation Wizard

Secure destruction of files – Windows add-in shredder facility, shredder wizard, securely shreds files, folders and unused disk space

Facilitates CD/DVD burning – Burn documents and audio files, with the option of erasing CD/DVD, viewing device capabilities and media information.

Overall BackupShield Professional can be viewed as a complete toolkit of features which allows you to perform primary tasks of creating, recovering and managing archives and backups.
