

8MAN

Access Rights Management. **Only much Smarter.**

8MAN Access Rights Management for Office 365

Service portfolio for SharePoint Online

Microsoft Office 365® provides web-enabled access to email, documents, contacts and calendars on almost any device. Due to the wide ranging accessibility the question of securing the access rights becomes even more important.

The core problem of SharePoint Online has not changed: The analysis and administration of authorizations on SharePoint is a complex matter. The on-board Microsoft resources do not allow for a holistic view of the authorized permissions of individual SharePoint resources.

Besides the classic SharePoint Versions 2010, 2013, 2016 8MAN also supports SharePoint online in cloud and hybrid environments.

The 8MAN SharePoint Add-on integrates all SharePoint resources in 8MAN. The analysis and administration of permissions takes place centrally and in line with the access rights management of other applications.

The following services can be executed in 8MAN:

PERMISSION ANALYSIS

- Identify access rights to SharePoint resources
- Identify interrupted permissions in the tree structure
- Compare two different access rights situations (Scan Comparison)
- Analyze access rights situations from the past
- Identify multiple permissions

DOCUMENTATION & REPORTING

- Who has access to what?
- Identify Mailbox Permissions

USER PROVISIONING

- Change permissions to SharePoint resources

8MATE for
Exchange

Service portfolio for Exchange Online

Microsoft Office 365® provides web-enabled access to email, documents, contacts and calendars on almost any device. Due to the wide ranging accessibility the question of securing the access rights becomes even more important.

The core problem of Exchange Online has not changed: The administration of permissions with Microsoft Exchange is complex. The available Microsoft resources do not allow for a holistic view of access rights to public files and mailboxes. The administration of access rights is cumbersome and time-consuming.

Besides the classic Exchange Versions 2010, 2013, 2016 8MAN also supports Exchange Online in cloud and hybrid environments.

The 8MAN Exchange Add-on enables you to expand 8MAN to email resources. Thus, analysis and administration of permissions take place centrally and in line with the access management for other applications. In the familiar 8MAN overview, you see at a glance who is authorized to access public folders, mailboxes, mailbox folders and, for instance, calendars.

The following services can be executed in 8MAN:

PERMISSION ANALYSIS

- Identify the access rights on Public Folders
- Identify the access rights to Mailboxes
- Identify the access rights on mailbox folders
- Identify the access rights to calendars
- Display proxy and Send As rights for mailboxes
- Analyze access rights situations from the past
- Identify permissions on distribution groups
- Identify members in distribution groups
- Identify properties of distribution groups

DOCUMENTATION & REPORTING

- Who has access to what?
- Identify Mailbox Permissions

USER PROVISIONING

- Change permissions to mailboxes
- Edit out-of-office message
- Change Mailbox size
- Modify e-mail addresses on mailboxes and distribution groups
- Edit permissions on distribution groups
- Edit Distribution Group Members
- Edit the moderation of distribution groups
- Change the distribution group manager
- Edit the maximum e-mail size for distribution groups
- Edit E-Mail addresses for mailboxes, distribution lists and contacts
